

Large Format Printing

Customizable Indoor/Outdoor Signage

ACCEPTABLE FILE FORMATS

Our Prepress department works in the Adobe Creative Suite to produce print files. Use these guidelines to ensure smooth and timely production of your project. Deviation from these guidelines could lead to decreased quality or additional costs for prepress work.

We prefer InDesign exported Press Quality PDF files. This ensures all pertaining fonts and images will be included in your file. If you are using Adobe Illustrator you must include the fonts and images as links in addition to the .ai file when submitting art. Use vector images for a clear look and feel to your images.

For Raster/Photoshop images:

- Provide a 150 DPI Press Quality
- PDF files at your finished output size.
- Jpgs can be used but these file types appear blurry due to compression issues.

File types NextPage can not use for Graphics output:

- GIF
- Word Documents
- Power Point Files

If color matching is critical, be sure and call out the PMS colors. CMYK color break downs cannot be guaranteed to print correctly.

METHODS FOR SUBMITTING GRAPHICS

Files under 10 Megs can be emailed. Larger files can be sent using the NextPage FTP uploader or through other content sharing websites such as Dropbox, WeTransfer and Box. Contact your NextPage sales representative for FTP credentials or additional questions. Don't have a sales rep yet?
